

AKAI APC Key 25 controller mapping for SpintTool

Hi! These are my settings for AKAI APC Key 25 controller. File is named: AKAI_APC_Key25.sbm

The 8x5 pad grid is used to activate loops; the 5 buttons on the right ("Scene launch") select the proper clip row and the knobs control the volumes of the clips. Transport functions are linked to 4 buttons: "stop all clips" is Stop, "Shift" is rewind, "Play/Pause" is play and "Rec" for recording.

The 8 buttons under the clips are used to recall the scenes (8 scenes, numbered from 1 to 8, from left to right).

See image in the next page.

Have fun! Enjoy life
